

PRESS RELEASE

16th January 2017

The new Parklift 405 replaces its predecessor Parklift 402. The advantages of the new development are in the reduced assembly dimensions with unchanged vehicle dimensions.

The new Parklift 405 enters the market with the same innovations as the Parklift 450 and also has a further advantage. With even lower ceiling height, the same sized vehicles can be parked as in the Parklift 450, while the lower parking space is inclined. This is a response to growing car dimensions and shrinking space size. The lower platform is accessible with a gradient of 14%. The upper platform has a minimum inclination of 2%, which helps with drainage of the upper parking space.
